

Pipeline & Storage Management Systems

empowering energy leaders globally

For owners of capital-intensive pipelines and storage facilities, ESG helps streamline complex transactions through cost-efficient, internet-based systems.

Streamlined Transactions

Introducing our suite of pipeline and storage management systems developed to efficiently and effectively manage your energy assets, that result in administrative advancement and increased customer satisfaction.

ESG's Storage and Pipeline Management Solutions are focused on providing technology that meets operating and regulatory requirements of the North American Energy Standards Board (NAESB) and the Federal Energy Regulatory Commission (FERC).

Built-in Compliance

Customers are provided domestic support from a specific Customer Support person, as well as the ability to access support services 7 days a week, 24 hours a day via an after-hours Customer Support Line. ESG's infrastructure utilizes state-of-the-art, redundant data centers to insure continuous service availability.

Expertise you can trust

ESG's solutions eliminate time and risk by automating storage and pipeline management processes. Data is shared instantaneously, which allows for timely responses to market events, shipper changes and regulatory requirements.

Efficient, cost effective solutions

Streamlined Transactions Utilizing Web Based and Mobile Friendly Systems

For operators of gathering, midstream and interstate natural gas pipelines, QuickNom® is a cost-effective system for managing daily processes and activities. Features include Nomination and Confirmation scheduling, Measured Volumes, Operational Balancing Agreements, Shipper Imbalances, Contracting Rates, reports and Invoicing.

QuickNom Pipeline Management System

This inventory management system provides all the key information needed to manage storage facilities and hubs. Automated processes result in administrative efficiencies and increased customer satisfaction. Features include Storage Nominations and Confirmations, Scheduling Customer Inventories, Parks, Loans, Wheeling and Other Storage Services.

NGI Natural Gas Storage Management System

Quick Tariff acts as a “packager” for eTariff filings, bundling together user-supplied Tariff revisions with stored Tariff parameters. Quick Tariff maintains all FERC-required Tariff “meta data” and uses filing wizards so that creating an eTariff filing is quick and complete. All filing elements are validated and combined into an XML file for simple eTariff submission.

QuickTariff

COPS provides the operators of crude oil pipelines with a straightforward, cost-effective system for managing key pipeline processes and activities. Features include Nominations, Confirmations, Scheduling, Shipper Management, Measurement, Inventories, Invoicing & Deductions.

Crude Oil Pipeline System (COPS)

PAS is a service which can be broadened or narrowed to match transaction volumes, budgets, & system interfaces. The service delivers reliable communications while ESG manages all aspects of message security. Features include Customer Inventories, Parks, Loans and Wheeling services.

Pipeline Automation Service (PAS)

Why ESG?

With over 9 million meters in production, ESG’s DMS is the most widely-used solution in the energy industry, supporting more than 150 electric and gas utilities across North America, Japan, UK and Ireland. ESG reduces costs and risks compared to developing and operating systems internally or with another less experienced vendor. DMS is just one offering in ESG’s comprehensive suite of tightly integrated solutions covering every stage of the retail energy supply chain.
